

RYCT MARINA NEWSLETTER

Edition 4 - November 2022

Boating season is once again upon us and the Wooden Boat Festival in February 2023 is looking to be bigger than ever.

If you are planning to head away on your boat in December, January or February, we would appreciate being able to use your berth to accommodate visitors to the RYCT marina.

Please note there is no guarantee we will fill your berth but if we do, you may receive a rebate credited to your RYCT account.

If your plans are confirmed and your berth is empty for a period, please contact Nicole on admin@ryct.org.au (03) 6223 4599.

UPCOMING EVENTS

Richardson Beach Picnic

Sunday 27 November 2022

Join fellow cruisers for a relaxed get together at the Richardson Beach Picnic.

See the RYCT website for details or phone 6223 4599.

Updated tech on the marina

In the interests of security and safety on the marina, the RYCT has installed some new security cameras. The marina is filmed from the front gate and along the main walkways out to the end of G & H arms. While we respect your privacy, we are also here to protect your investment.

Along with new cameras on the marina, the installation of new Wi-fi boosters will be completed by the end of November. If you would like to access our free Wi-fi, please visit Reception to obtain password.

We have a limited number of large lockers available for rent right now.

Email Nicole at admin@ryct.org.au to find out more.

For RYCT Slipway bookings and enquiries, please contact the Bosuns:

Email – bosun@ryct.org.au

Insurance updates

It's easy to overlook the important requirement to provide the office with an updated copy of your boat insurance each year.

When you receive your renewed insurance, forward a copy through to Nicole at admin@ryct.org.au

PUBLIC LIABILITY INSURANCE

Just a reminder that the requirement for public liability insurance is now \$10million

A reminder to boat owners that sullage, wastewater, sewerage, oil, chemical, spirits, inflammables or any other contaminants must not be discharged into marina waters.

Such discharge, whether intentional or not, may result in termination of marina berth and recovery of costs.

REPORT
MARINE PESTS

Marine pests in marinas

Report marine pests

Protect our marine environment. Look out for marine pests on:

- vessels
- submerged structures
- pontoons and equipment.

White colonial sea squirt

Asian green mussel

Asian paddle crab

Asian kelp, Wakame

Australia's waterways are teeming with unique animals and plant life. Our marine environment is beautiful and diverse, but it's also fragile. Keeping marine pests out of Australian waters and reducing their spread means we have safe and productive oceans to enjoy for recreation, and a sustainable seafood industry.

Marine pests are **marine plants and animals that are not native to Australia**. They include crabs, mussels, sea stars, worms and algae. Marine pests can have environmental, economic and social impacts. They can damage marine structures, habitats and industries and potentially affect human health.

If marine pests go unreported and establish in our marine environment, it becomes almost impossible to get rid of them. Eradication programs could impact on vessel maintenance, the running of your day-to-day business, or enjoyment of marine activities. Prevention is therefore the key to limiting the risk of successful introductions, and early detection and reporting is essential to limit the spread of marine pests.

Marine pests must be reported to the department of agriculture or primary industries in the state or territory in which they are found. It is critical that authorities are notified as soon as possible to have the best chance of containing the pest. Remember, **if you see a suspected marine pest, report it**. You can find information and relevant contact details for reporting suspected marine pests at marinepests.gov.au/report

How to protect your marina

Marina operators and users rely on the good health of Australia's marine ecosystems for commerce and recreation and they can be our first line of defence against invasive marine animal and plant pests.

You can protect your marina, business infrastructure and vessels from marine pests, and in doing so, protect the biodiversity of the environment around you.

There are simple steps you can take to help protect your marina and vessels:

- Keep it clean and follow best practice
- Learn how to identify marine pests
- Keep watch for marine pests
- Report unusual marine animals or plants.

More information, including a comprehensive list of marine pests and identification guides, are available at marinepests.gov.au

Protect our marine environment. Look out for marine pests on:

- vessels
- submerged structures
- marinas and equipment.

Keep it clean

Keeping vessels and marina infrastructure free of biofouling plays a critical part in stopping the spread of marine pests into, and around Australian waters. Refer to the [national biofouling guidelines](#) for marinas, slipways and recreational boating facilities.

If your marina provides vessel cleaning facilities, make sure biofouling does not re-enter the waterways and is disposed of safely.

- Ensure your vessel has an appropriate in-service anti-fouling coating.
- Inspect and clean your vessel regularly before moving locations.
- Check niche areas and flush internal seawater systems frequently.
- Inspect and clean all marine equipment and gear that may get wet.

A dirty marina containing marine pests is a source for further spread. Visiting vessels can spread marine pests to new areas and from one marina to another. Shared responsibility is needed to ensure marinas, vessels and equipment are continuously clean from marine pests.

Learn how to identify marine pests

While we need to be vigilant for new marine pests arriving, we also need to be alert to marine pests that have spread to unaffected locations. Some marine pests may be under a government eradication or management program.

Examples of marine pests in Australian waters include:

- White colonial sea squirt
- Asian green mussel
- Asian paddle crab
- Asian kelp, wakame.

Keep watch for marine pests

Marine pests, such as exotic mussels, can be found attached to vessels or attached to submerged structures, such as pontoons, moorings, floating docks, ropes and buoys. Anchor wells, ropes, internal water systems and wet

If you see something unusual, report it

Keeping marine pests out of Australian waters means we have clean and safe oceans to enjoy for recreation, and reduced costs for maintenance of vessels, equipment and marina infrastructure.
